

# AGRATILUBE™

The new developed topcoat for dry to touch phosphated parts

AGRATILUBE™ is a water based topcoat with dry to touch finish, acts as a corrosion prevention layer and as a lubricant. Hazy, matte finish that doesn't alter the appearance of phosphated parts.

## Phosphate Base Layer

AGRATILUBE™ can be applied on the most common phosphate conversion layers used for screws.

\*Mn Phosphates, Zn-Fe Phosphates, Zn Phosphates /Zn  $\mu$ -Phosphates

## Appearance

- Hazy, matte finish
- No alteration of phosphated parts appearance
- Dry to touch

## Corrosion and chemical resistance

- Increased humidostatic chamber red rust resistance, compared to standard phosphated and oiled coatings:
    - 8 hours of DIN EN ISO 6270-2 CH corrosion test (100% Humidity, 40°C) for a ZnCa  $\mu$ -phosp. layer
- Suitable for a dip-spin or rack application

## Coefficient of friction

- $\mu_{tot}=0.08 - 0.14$  according to ISO 16047
- Extremely stable performance:
  - tightening on steel
  - tightening on KTL
  - tightening on aluminium
- Multi-tightening friction coefficient stability, at least 5 times; prevents stick-slip phenomenon

## 5 tightenings according to ISO 16047

# AGRATILUBE™

The new developed topcoat for dry to touch  
phosphated parts

## Technical details

- Water based topcoat
- Needs high temperature curing (°C 100) for a correct application
- Does not contain CrVI or REACH restricted chemicals
- Ready to use, does not need any dilution
- Shelf life of finished product is higher than oiled parts
- Doesn't affect the H-embrittlement phenomena
- Very good adhesion

## Cleanliness performance

Due to the dry to touch nature of the coating, the cleanliness level tested according to VDA 19 is better compared to screws coated with  $\mu$ -phosph. + oil.
